

$$a \div b = a \times \frac{1}{b} \quad (b \neq 0)$$

$$a \div b = a \times \frac{1}{b} \quad (b \neq 0)$$

$$a \div b = a \times \frac{1}{b} \quad (b \neq 0)$$

$$a \div b = a \times \frac{1}{b} \quad (b \neq 0)$$

$$a \div b$$

$$a \div b = a \times \frac{1}{b} \quad (b \neq 0)$$

$$a \div b = \frac{a}{b}$$

$$a \div b = a \times \frac{1}{b} \quad (b \neq 0)$$

$$a \div b = \frac{a}{b}$$

$$= a \times \frac{1}{b}$$

$$a \div b = a \times \frac{1}{b} \quad (b \neq 0)$$

$$a \div b = \frac{a}{b}$$

$$= a \times \frac{1}{b}$$

∴

$$a \div b = a \times \frac{1}{b} \quad (b \neq 0)$$

$$a \div b = \frac{a}{b}$$

$$= a \times \frac{1}{b}$$

$$\therefore a \div b = a \times \frac{1}{b} \quad (b \neq 0)$$

$$a \div b = a \times \frac{1}{b} \quad (b \neq 0)$$

$$a \div b = \frac{a}{b}$$

$$= a \times \frac{1}{b}$$

$$\therefore a \div b = a \times \frac{1}{b} \quad (b \neq 0)$$

$$a \div b = a \times \frac{1}{b} \quad (b \neq 0)$$
