

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

두 쌍의 대각의 크기가 각각 같은 사각형은
평행사변형이다.

(The rectangle with the same measure of two pairs of opposite angles
is a parallelogram.)

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.

The rectangle with the same measure of two pairs of opposite angles is a parallelogram.
