

직사각형의 두 대각선은 길이가 같고 서로 다른 것을 이등분한다.

(Two diagonals of a rectangle are equal in length and bisect each other.)

Two diagonals of a rectangle are equal in length and bisect each other.

Two diagonals of a rectangle are equal in length and bisect each other.

Two diagonals of a rectangle are equal in length and bisect each other.

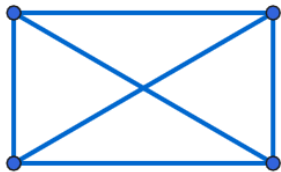

Two diagonals of a rectangle are equal in length and bisect each other.

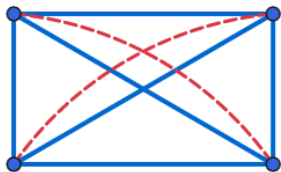

Two diagonals of a rectangle are equal in length and bisect each other.

Two diagonals of a rectangle are equal in length and bisect each other.

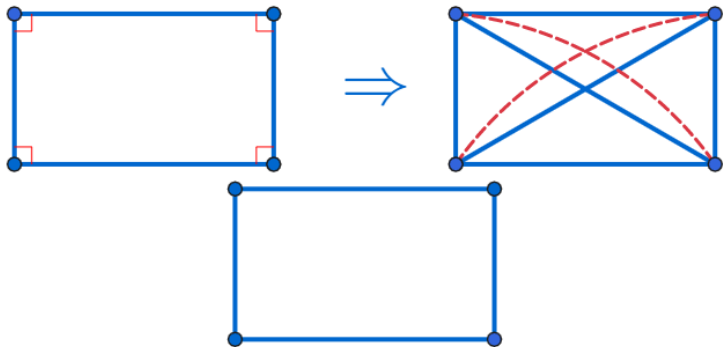

Two diagonals of a rectangle are equal in length and bisect each other.

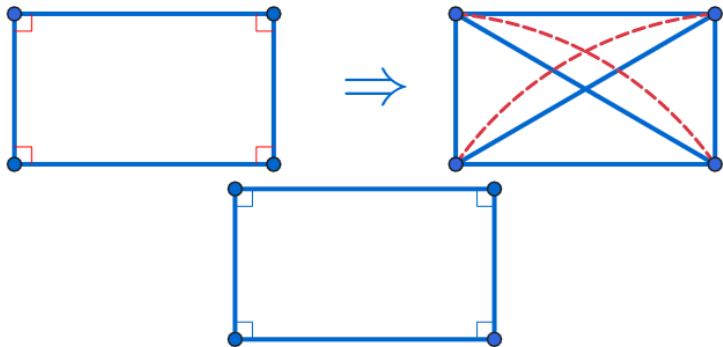

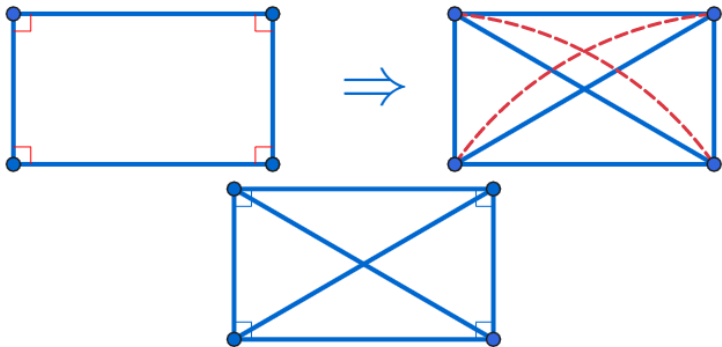

Two diagonals of a rectangle are equal in length and bisect each other.

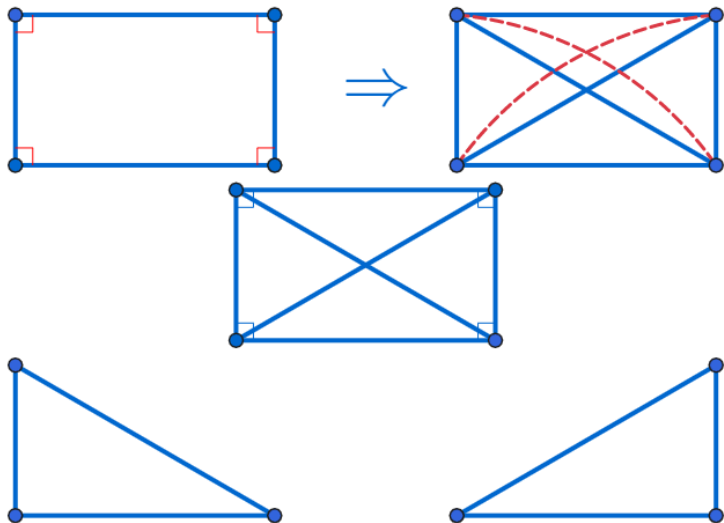

Two diagonals of a rectangle are equal in length and bisect each other.

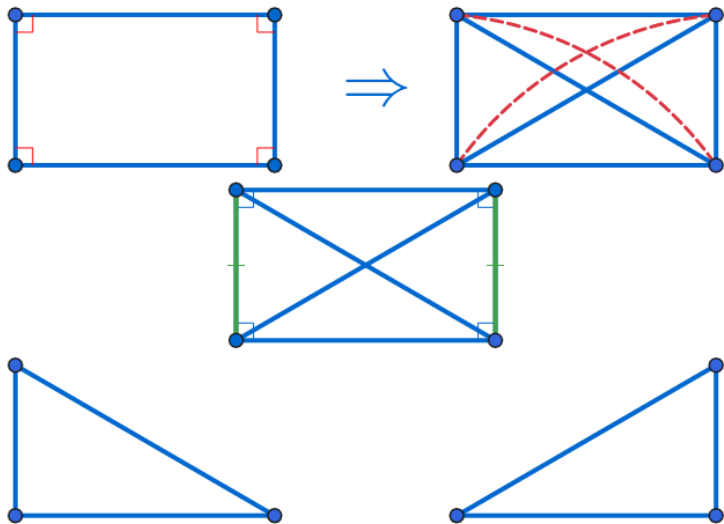

Two diagonals of a rectangle are equal in length and bisect each other.

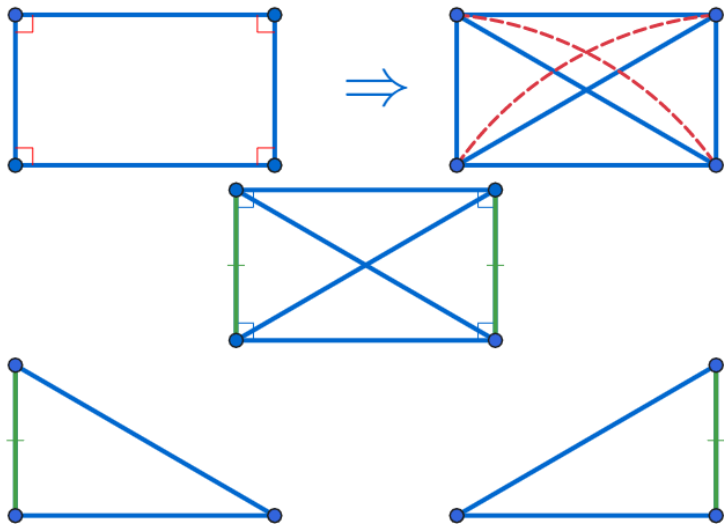

Two diagonals of a rectangle are equal in length and bisect each other.

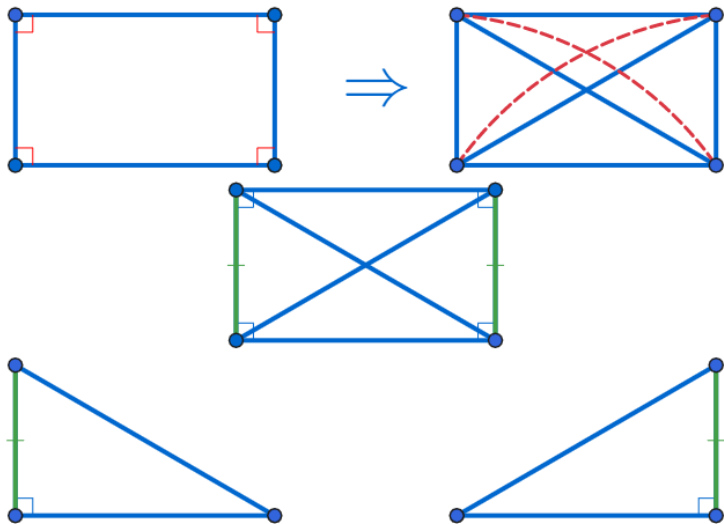

Two diagonals of a rectangle are equal in length and bisect each other.

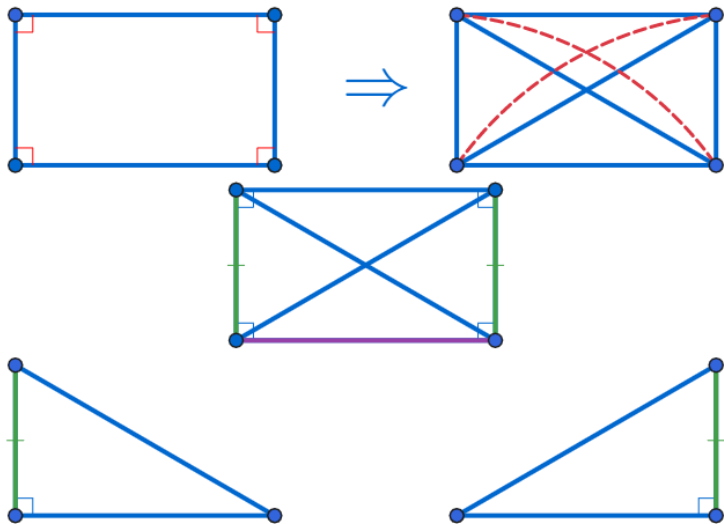

Two diagonals of a rectangle are equal in length and bisect each other.

Two diagonals of a rectangle are equal in length and bisect each other.

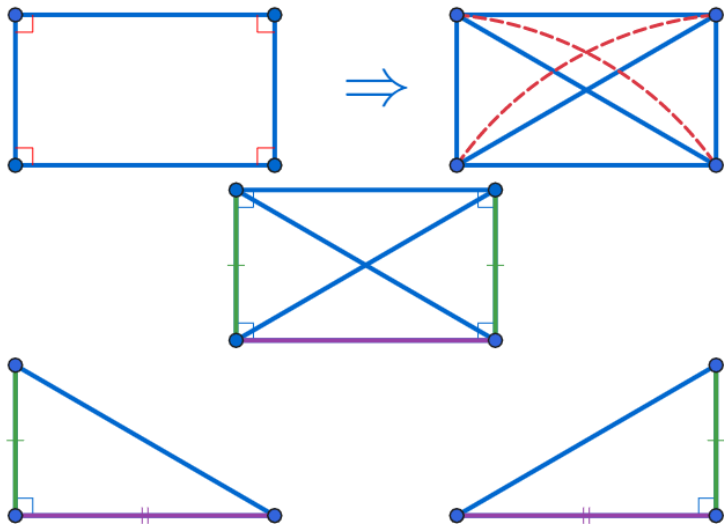

Two diagonals of a rectangle are equal in length and bisect each other.

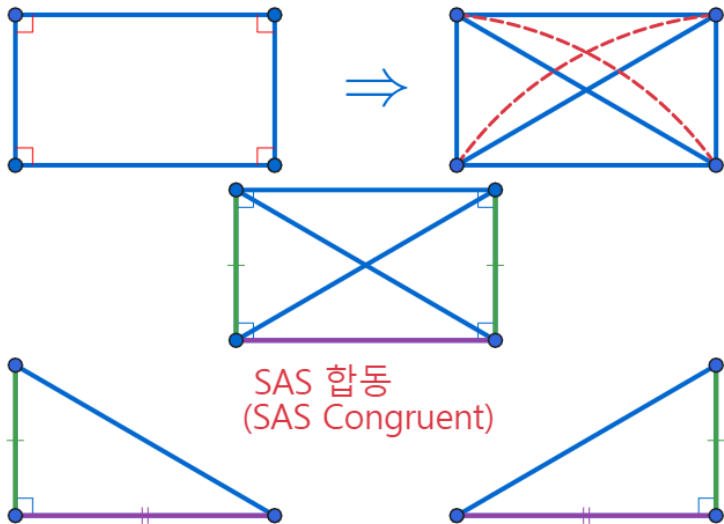

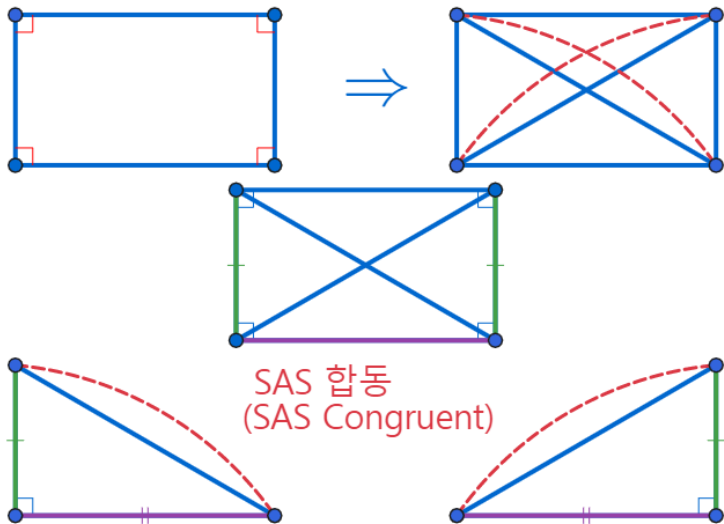

Two diagonals of a rectangle are equal in length and bisect each other.

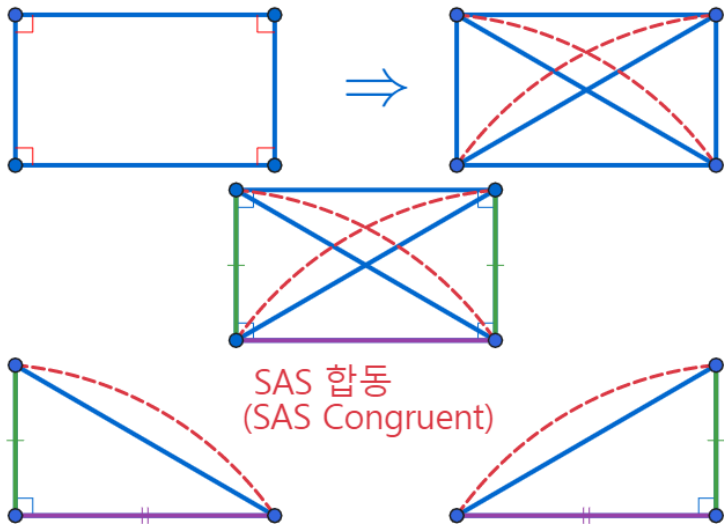

Two diagonals of a rectangle are equal in length and bisect each other.

Two diagonals of a rectangle are equal in length and bisect each other.

Two diagonals of a rectangle are equal in length and bisect each other.

Two diagonals of a rectangle are equal in length and bisect each other.
