The Area of Obtuse Triangle

$$\sin(180^\circ - A) = \frac{\overline{CH}}{b}$$

The Area of Obtuse Triangle

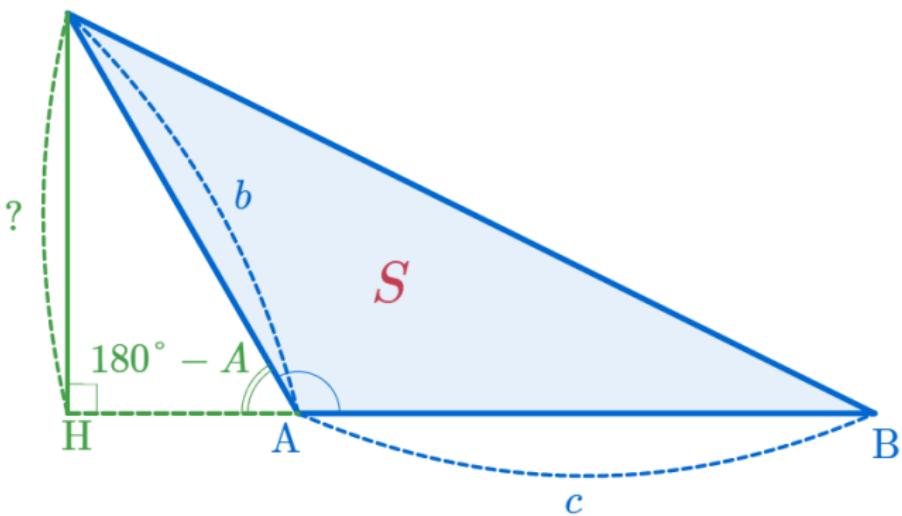

$$\sin(180^\circ - A) = \frac{\overline{CH}}{b}$$

The Area of Obtuse Triangle

$$\sin(180^\circ - A) = \frac{\overline{CH}}{b}$$

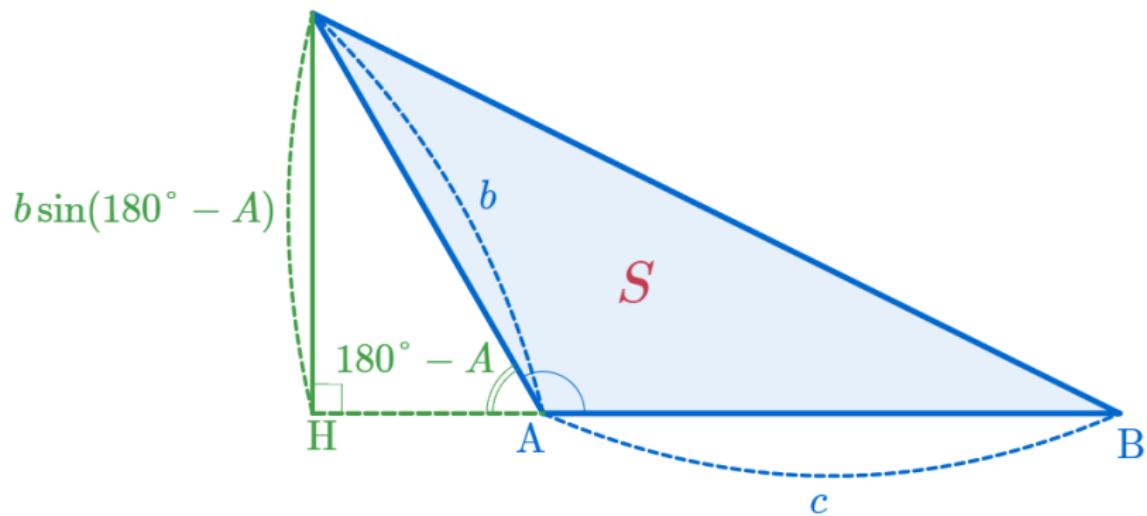

$$C \quad \therefore \overline{CH} = b \sin(180^\circ - A)$$

The Area of Obtuse Triangle

$$\sin(180^\circ - A) = \frac{\overline{CH}}{b}$$

$$C \quad \therefore \overline{CH} = b \sin(180^\circ - A)$$

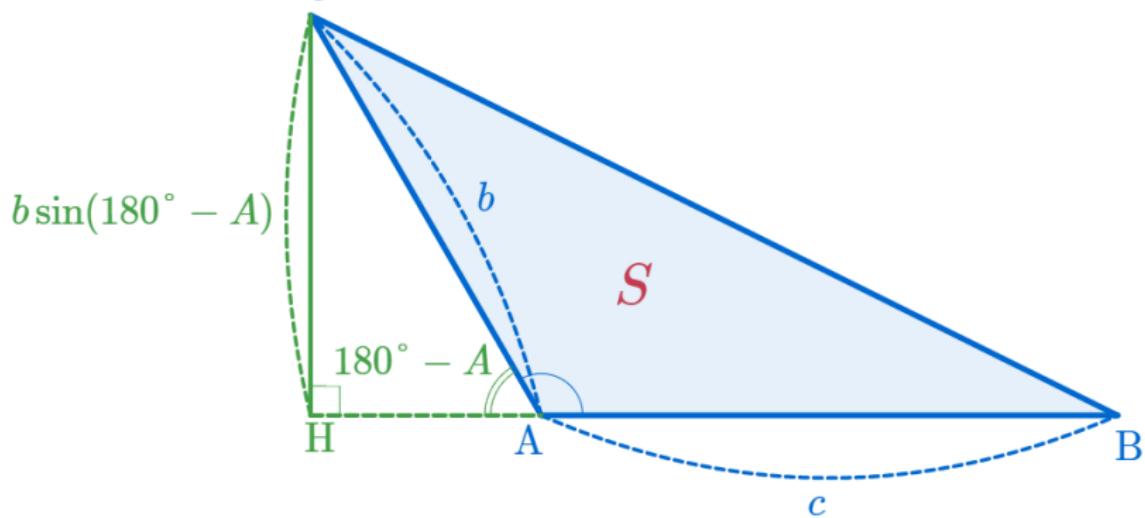

The Area of Obtuse Triangle

$$\sin(180^\circ - A) = \frac{\overline{CH}}{b}$$

S

C $\therefore \overline{CH} = b \sin(180^\circ - A)$

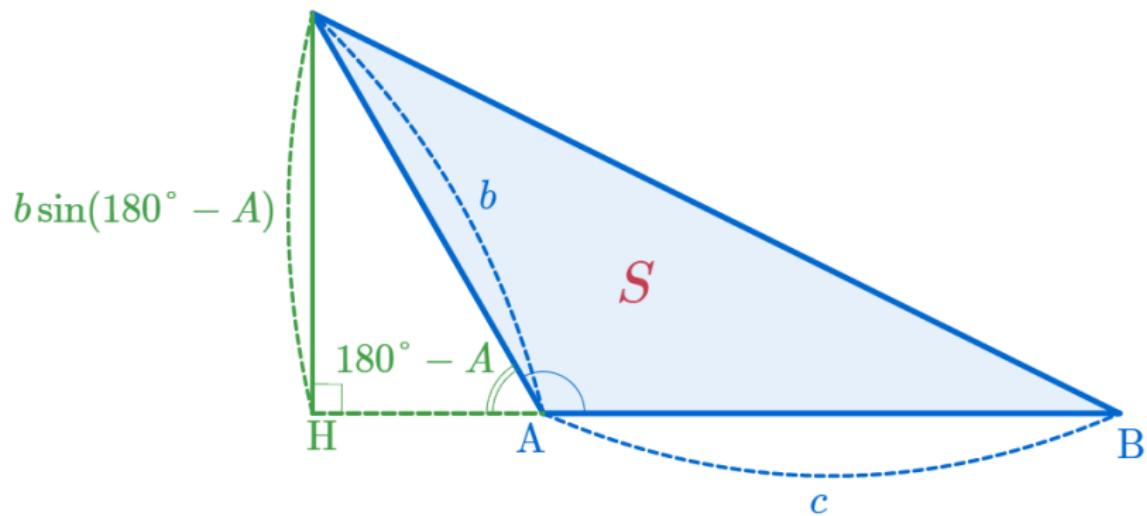

The Area of Obtuse Triangle

$$\sin(180^\circ - A) = \frac{\overline{CH}}{b}$$

$$S = \frac{1}{2} \times c \times b \sin(180^\circ - A)$$

C $\therefore \overline{CH} = b \sin(180^\circ - A)$

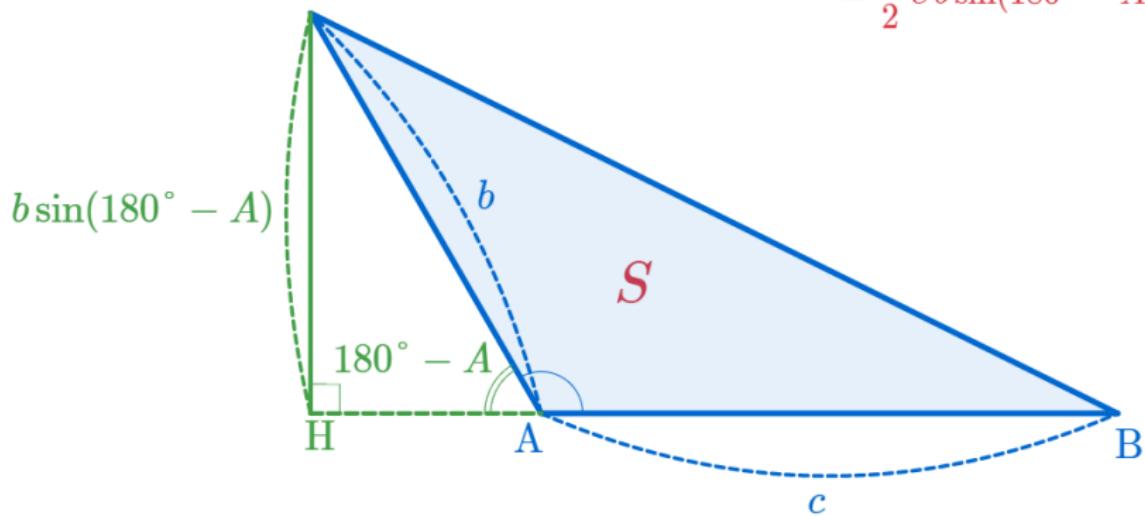

The Area of Obtuse Triangle

$$\sin(180^\circ - A) = \frac{\overline{CH}}{b}$$

$$C \quad \therefore \overline{CH} = b \sin(180^\circ - A)$$

$$S = \frac{1}{2} \times c \times b \sin(180^\circ - A)$$

$$= \frac{1}{2} c b \sin(180^\circ - A)$$

The Area of Obtuse Triangle

$$\sin(180^\circ - A) = \frac{\overline{CH}}{b}$$

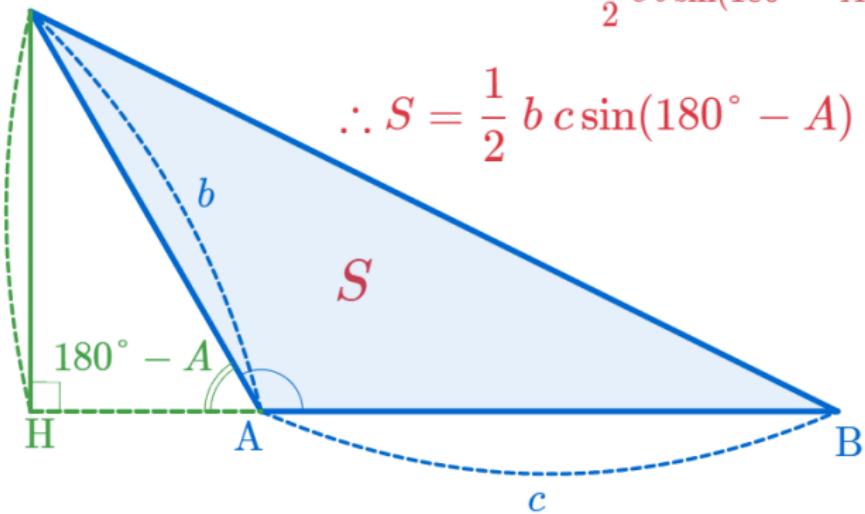

$$C \quad \therefore \overline{CH} = b \sin(180^\circ - A)$$

$$S = \frac{1}{2} \times c \times b \sin(180^\circ - A)$$

$$= \frac{1}{2} c b \sin(180^\circ - A)$$

$$\therefore S = \frac{1}{2} b c \sin(180^\circ - A)$$

$$b \sin(180^\circ - A)$$
