

When a straight line is parallel to a plane, the intersection of any plane containing the given straight line with the given plane is parallel to the given straight line.

한 직선이 한 평면과 평행일 때 주어진 직선을 포함하는 임의의 평면과 주어진 평면과의 교선은 주어진 직선과 평행하다.

(When a straight line is parallel to a plane, the intersection of any plane containing the given straight line with the given plane is parallel to the given straight line.)

When a straight line is parallel to a plane, the intersection of any plane containing the given straight line with the given plane is parallel to the given straight line.
